

www.preventcancer.org

Our mission is the prevention and early detection of cancer through scientific research, education and community outreach to all populations, including children and the underserved.

Research. Education. Outreach.

For more than 20 years, we have carried out our mission in three main ways:

- We fund research that helps us better understand how to prevent cancer.
- We educate people about how they can prevent cancer.
- We reach out to communities across the country through our resources, events and partnerships with other organizations.

The Foundation focuses its energies and resources on those cancers— including **lung, breast, prostate, colorectal, cervical, skin, oral and testicular** — that can be prevented through lifestyle changes or early detection and treatment.

Leader in Cancer Prevention

When the Prevent Cancer Foundation began its work in 1985, cancer prevention was not regarded as a major strategy in the war against cancer. Today, however, prevention research is recognized as essential to the fight against cancer. Scientists are discovering new ways that people can reduce their cancer risks through a healthy lifestyle that includes proper diet, exercise and regular medical screenings. The Foundation plays a pivotal role in initiating these scientific advances.

Commitment to Prevention

The Prevent Cancer Foundation (formerly the Cancer Research and Prevention Foundation) has provided more than \$106 million to fund more than 300 scientists at over 150 leading academic institutions across the country. We apply this scientific knowledge by teaching people ways to reduce their risk of cancer.
