Dear Friends,

In the words of Robert Frost, we have taken the road less traveled—and that has made all the difference. The Prevent Cancer Foundation began at a time when most of our colleagues in the cancer world were focused solely on finding a cure, the so-called “magic bullet.”

In the three decades since, we have continued to be a leader in cancer through our focus on saving lives through prevention and early detection, as doctors, researchers and everyday people recognize prevention is the key to beating cancer.

Looking back, we celebrate our accomplishments and allow that important work to guide us as we continue to work toward our vital, though unfinished, vision to Stop Cancer Before It Starts™.

In July, then-Surgeon General Dr. Boris Lushniak issued a call to action to prevent skin cancer, highlighting the dangers of tanning and the steps the public should take to protect themselves. The Foundation was an active partner in spreading awareness about the most common—and most preventable—type of cancer and, in May, our Congressional Families Cancer Prevention Program hosted a briefing on Capitol Hill about the hazards and allures of indoor tanning on college campuses.

Looking toward the months ahead, we are excited by the promise and potential we see to continue to make a difference.

Drs. Andrew Dannenberg and Clifford Hudis and their team at Weill Cornell Medical Center and Memorial Sloan Kettering Cancer Center will attempt to validate a blood-based signature of fatty tissue inflammation in the breast. This promising project could be a crucial step towards developing a blood test that identifies women who are at increased risk of developing breast cancer. Dannenberg’s lab has long been exploring the relationship between inflammation and cancer.
“Through prevention research, we have begun to understand the very nature of cancer – its complex beginnings within human cells. This information is allowing us to prevent the disease, detect it earlier and treat it more effectively.

Understanding cancer’s origins is promoting its demise.

Carolyn R. Aldigé
President and Founder

In recent work, he has used mice and human breast tissue samples to establish a link between obesity, inflammation and aromatase, a key enzyme involved in the production of estrogens. This is one of multiple potential mechanisms by which inflamed fat may increase the risk of breast cancer.

The two-year grant helping fund this project was made possible by the 2015 Awesome Games Done Quick marathon and is the largest grant in the Foundation’s history.

Congress will vote on the “Protect Access to Lifesaving Screenings Act” (PALS Act), introduced in the Senate (S. 1926), and its companion bill in the House under the same name (H.R. 3339). These bills provide a two-year moratorium on implementation of recent draft guidelines from the United States Preventive Services Task Force (USPSTF) that would threaten access to mammograms for 22 million women ages 40-49. The Foundation continues to recommend that women should begin annual mammograms at age 40, and we have been actively advocating for Congress to pass the PALS legislation.

In January, we will launch a new campaign entitled Think About The Link, drawing the connection between viruses and cancer. Through this multi-year campaign, we aim to increase vaccination rates for the human papillomavirus (HPV) and Hepatitis B (hep B), as well as access to Hepatitis C (hep C) treatment in vulnerable populations.

It is with great pride that we look back on the accomplishments of the past year and with unwavering commitment that we press onward to face the challenges of the coming year. We hope you will join us as we help people of every age, race, gender, and from all walks of life, to Stop Cancer Before It Starts!™

Sincerely,

Carolyn R. Aldigé
President and Founder

In January, we will launch a new campaign entitled Think About The Link, drawing the connection between viruses and cancer. Through this multi-year campaign, we aim to increase vaccination rates for the human papillomavirus (HPV) and Hepatitis B (hep B), as well as access to Hepatitis C (hep C) treatment in vulnerable populations.

It is with great pride that we look back on the accomplishments of the past year and with unwavering commitment that we press onward to face the challenges of the coming year. Sincerely,

Carolyn R. Aldigé
President and Founder
2014 (FY15) AWARDEES

As we look back on this year’s research grantees, we look forward to seeing the fruits of their labor and the impact their research will have on cancer prevention or early detection.

SUSAN BULLMAN, PH.D.,
DANA-FARBER CANCER INSTITUTE

NAMED AWARD:
Figdor Family Fellowship in Cancer Prevention

WHAT SHE WILL STUDY:
Correlation of Fusobacterium Nucleatum Bacteria Strains and Colon Cancer Risk

This work may help identify some individuals who may be at high risk of developing colorectal cancer.
This analysis is likely to reveal subgroups among infected individuals who are at high risk for developing colorectal cancer.
— Susan Bullman, Ph.D.

Colorectal cancer (CRC) is responsible for approximately 694,000 deaths annually worldwide. Recently, a particular bacterium, Fusobacterium nucleatum (Fn), was discovered in CRC, with the potential to form tumors in CRC animal models. Dr. Bullman and her team will identify the genomic differences between cancer and non-cancer associated Fn strains.

“This analysis is likely to reveal subgroups among infected individuals who are at high risk for developing colorectal cancer,” says Dr. Bullman. Identification of specific bacterial and host molecular signatures may reveal new biomarkers for assessing CRC risk and facilitating early detection, diagnosis or prognosis, in addition to new drug targets for cancer prevention.

DEREK HUFFMAN, PH.D.,
Albert Einstein College of Medicine of Yeshiva University
NAMED AWARD:
Marcia and Frank Carlucci III Charitable Award in Cancer Prevention and Early Detection
WHAT HE WILL STUDY:
Effectiveness of Prevention Strategies on the Cancer Aging Interface
This work may help us better understand the relationship between getting older and developing cancer.

While it is generally understood that cancer is a disease of older persons, how aging increases cancer risk is not well understood. One major reason for this shortcoming is most animal models used to study cancer prevention give rise to tumors while the subjects are still relatively young, rather than when they are older. Many studies show that tissue stem cells also stop working as we age, and this may contribute to diseases such as cancer. Dr. Huffman and his team will test how well-known dietary (caloric restriction) and drug (rapamycin) interventions restore tissue function and prevent cancerous tumors.
QIANG SHEN, M.D., PH.D.,
The University of Texas MD Anderson Cancer Center

NAMED AWARD:
Holden Family Research Grant in Breast Cancer Prevention

WHAT HE WILL STUDY:
Impact of Novel Anti-Cancer Agents like HJC0152 on Breast Cancer Prevention

This work may lead to new ways to prevent breast cancer in the future.

A pressing challenge in breast cancer research is the prevention of estrogen-receptor (ER)-negative breast cancer and triple-negative breast cancer (TNBC). Approximately 60 percent of breast cancers are not preventable with currently available chemopreventive agents, such as tamoxifen and a class of drugs known as aromatase inhibitors.

---

DIVYA SAHU, PH.D.,
University of California, San Diego

WHAT SHE WILL STUDY:
Targeting of the Arginine-Nitric Oxide Pathway to Prevent Bladder Cancer Development

This work may help identify ways to keep bladder cancer from developing or slow its growth.

We hypothesize that arginine and downstream NO enhance bladder cancer cell survival, growth and invasion into surrounding tissue.

—Divya Sahu, Ph.D.

In the U.S., there were an estimated 74,690 new diagnoses and 15,580 deaths in 2014 due to bladder cancer. Bladder cancer starts with early abnormalities that cannot be easily diagnosed with current methods and that progress to cancer. Dr. Sahu and her team have identified an increase in the metabolism of a particular amino acid, arginine, as well as its by-product nitric oxide (NO), in bladder cancer. Dr. Sahu notes, “We hypothesize that arginine and downstream NO enhance bladder cancer cell survival, growth and invasion into surrounding tissue.” She and her team will investigate if targeting the arginine-NO components can stop bladder cancer development and/or growth.
Dr. Shen and his team have developed a new class of anti-cancer agents, including HJC0152 and other compounds. They will explore how these compounds can prevent these types of breast cancer. HJC0152 has demonstrated superior promise in several functions: hindering cell proliferation and colony formation, suppressing the growth of particular types of tumors and blocking ER-negative mammary tumor formation in animal models. This study will impact cancer prevention by investigating a new target and preventive agents that may lead to new cancer preventive drugs in the future.

TNBC means that a woman is estrogen-receptor negative, progesterone-receptor negative and negative for the protein known as HER2. Taken together, this means that she will not respond to hormone therapy or targeted therapy using an antibody to HER2.

Since 2003, deaths associated with oral cancer have increased by about nine percent because oral cancer is routinely discovered at late stages. Oral cancers are preceded by pre-cancerous lesions, and approximately 18 percent become cancer. We need new technologies to predict which lesions will become cancerous. Dr. Zhou and his team will examine pre-cancerous tissue samples to identify features (microRNA biomarkers) that are unique to pre-cancerous lesions.

XIAOFENG ZHOU, PH.D., UNIVERSITY OF ILLINOIS AT CHICAGO

NAMED AWARD: Lilly USA Research Award in Cancer Prevention and Early Detection

WHAT HE WILL STUDY: Development of MicroRNA Biomarker Diagnostic Tools for Early Oral Cancer Prevention

This work may lead to new ways to detect oral cancer earlier.

These unique genomic features will provide us with molecular bases for early detection diagnostic tools of those aggressive lesions.

—Xiaofeng Zhou, Ph.D.

For more detailed information, please visit: http://preventcancer.org/our-work/grants-fellowships/2014-awardees/
Moving Forward with Education

The National Dialogue for Action™ in cancer screening is an annual conference that convenes diverse stakeholders committed to realizing the lifesaving potential of cancer screening in all communities. The conference covers issues related to cancer screenings driven by guidelines (colorectal, cervical, breast and lung) and other cancer screenings (such as liver, skin and prostate).

Dialogue by the numbers:

- 265 participants hailed from 37 states, the District of Columbia, and Puerto Rico
- 15 American Indian/Alaska Native tribes and organizations, and two other countries, Japan and Israel

“The panel discussions were all very well done so as to present varying but complementary viewpoints.”

“The beauty of this meeting is the diversity in this room.”

- Deputy Surgeon General of the United States, Rear Admiral Boris Lushniak, M.D., M.P.H.

Their post-Discussion plans:

- 85% intend to implement change in their workplaces or in their communities as a result of attending the conference.
- About one-half plan to network with colleagues they met at the 2015 Dialogue.
- 65% intend to be part of the 2016 Dialogue.

Dan Shapiro, Ph.D., childhood cancer survivor and author of "Mom's Marijuana."
The James L. Mulshine, M.D., Leadership Award was presented to Dr. Claudia Henschke, a pioneer of the use of low-dose spiral CT to screen for lung cancer. Left to right: Andrew C. von Eschenbach, M.D., Claudia Henschke, Ph.D., M.D., Carolyn Aldigé and James L. Mulshine, M.D.

The twelfth annual workshop in utilizing low-dose spiral CT screening to accelerate progress in developing new therapies for early lung cancer and other tobacco-induced diseases took place in May. This meeting has been the catalyst to put lung cancer imaging on the map as a tool for early diagnosis of lung cancer.

Due in large part to participants at the Workshop, the CT screening for lung cancer was rolled out as a core, reimbursed cancer screening service under provisions of the Affordable Care Act (ACA), as well as Medicare and Medicaid. The purpose of the workshop was multifold:

▲ to improve screening quality by refining ways to measure tumor growth
▲ to drive the development of patient-donated databases
▲ to accelerate progress in the development of new therapies for the management of early disease
▲ to showcase the role of advocacy organizations in driving the science of lung cancer management
▲ to include COPD and heart disease as targets for early detection with a single CT

The Workshop has been the spark for advocacy around national lung cancer screening implementation. As a result, physicians are finding an ever growing number of early stage lung cancer for which we have no enhanced medical therapies. The Foundation continues to work with all stakeholders to ensure that low-dose CT screening is accessible and of high-quality, and includes smoking cessation counseling. Together, screening and cessation could provide a significant public health benefit which the Workshop will continue to explore.
The Congressional Families Cancer Prevention Program held its 22nd annual Action for Cancer Awareness Awards luncheon on September 18. The Program recognized CVS Health, Dr. Nancy Snyderman of NBC News and Congressional spouse Linda Bachus for educating the public about cancer prevention and early detection and encouraging healthy lifestyle choices. More than 50 Congressional spouses, 20 Members of the House and Senate and members of the Diplomatic Corps attended, along with leaders from the cancer community.

The Program also hosted four educational events on Capitol Hill:

- **In November, the focus was Disparities and Disservice in Health Care for Women Veterans.** Representative Tim Walz, the highest-ranking enlisted soldier ever to serve in Congress, served on the panel of experts.

- **A Lifestyle Matters briefing with Dr. Lisa Nelson was held in March; Rep. Richard Neal (D-Mass.) made introductory remarks. Dr. Nelson engaged the audience about the importance of healthy living as it relates to cancer prevention, driving home the significant impact diet has on our health.**

- **Hazards and Allure of Indoor Tanning Beds on College Campuses** was held in May and addressed the risks of using tanning beds. Speakers explored the current landscape of colleges and universities that enable tanning on or near campus. Representatives Rosa DeLauro (D-Conn) and Charlie Dent (R-Penna) spoke, along with Dr. Elizabeth Tanzi, a dermatologist, and Dr. Sherry Pagoto, a leading researcher on indoor tanning on college campuses. The briefing was referenced in more than 18 publications, including CNN, Newsweek, The Huffington Post, Boston Globe and Kaiser Health News.
In June, the Breast Cancer Screening: Ending the Confusion panel discussion focused on the widespread variation in guidelines for mammograms. Rep. Debbie Wasserman Schultz (D-Fla) spoke passionately from her perspective as a breast cancer survivor, emphasizing the critical need for annual mammograms for all women beginning at age 40.

Executive Director Lisa McGovern spoke at the University of Massachusetts Medical School on the role meditation can play in cancer prevention by reducing stress. Massachusetts Representatives Jim McGovern and Tim Ryan joined medical experts in discussing the benefits of meditation on health. With a successful and impactful year in the rearview mirror, the Congressional Families Cancer Prevention Program is driving forward to make a difference in the months ahead, both on and off Capitol Hill.
For the past eight years, the Foundation has been awarding community grants in an effort to help people prevent cancer or detect it earlier when it is more treatable.
Esperanza Health Centers seeks to improve colorectal cancer screening rates among uninsured and Medicaid-enrolled Latino adults, as well as insured patients, on the southwest side of Chicago. This will be accomplished through coordinated patient navigation, education and screening services. The Colorectal Cancer Pilot Project will provide colorectal education and screening to at least 1,000 patients ages 51 to 80.

American Samoa Community Cancer Coalition will work to motivate 750 American Samoan women to seek breast and cervical health information, screening services and follow-up of abnormal screening results in order to reduce late-stage diagnoses, through the culturally sensitive Tautai Leveai’i (Talk Story) project.
Martin Luther King Health Center will provide risk reduction and prevention education to at least 10,000 individuals, as well as screening services and needed follow-up care for at least 350 medically disenfranchised residents in northwest Louisiana. Targeted cancers include breast, cervical, prostate, colon and head, neck and throat.

Nevada Health Centers Inc. will use their mobile mammography unit to provide mammograms to women who otherwise would not have access to them. The purpose of the program is to increase early detection of breast cancer and to reduce breast cancer death rates. The grant will provide mammograms for 80 women in geographically-isolated areas throughout Nevada.
Mt. Sinai Breast Health Resource Program will implement the BreastCare Education and Screening Program through a partnership with Greenhope Services for Women, a residential treatment program for formerly incarcerated and addicted black and Hispanic women. The program aims to educate 200 women and provide screening services to at least 40 women in New York City.

The Center for Rural Health Development Inc. will convene a statewide HPV Vaccination Stakeholder Summit in West Virginia to improve and sustain HPV vaccination rates among 9 to 26-year-olds. The goal is to reduce incidence and mortality due to HPV-related cancers. Stakeholders will create an action plan that includes the development of coordinated traditional and social media messages, training opportunities, policy recommendations and evidence based-strategy recommendations. Virtually all cases of cervical cancer are caused by HPV. In addition, HPV is responsible for more than 90 percent of anal cancers, 65 percent of vaginal cancers, 50 percent of vulvar cancers and 35 percent of penile cancers.
This year the Prevent Cancer Foundation solidified its policy priorities. We are accomplishing each by working with the U.S. Congress, the executive branch (including federal agencies) and state legislatures, as well as colleague organizations and relevant stakeholders, including grassroots advocates.

Our priorities:

Prevention – Support and work toward policies and education efforts that will reduce cancer diagnoses and preventable deaths.

Access – Increase access to necessary health care services, including cancer prevention and screening, as well as resources for prevention and early detection.

Disparities – Reduce the barriers for all individuals (particularly those who are underserved) to achieve optimal health and wellness, including access, affordability and quality care.

Funding - Ensure adequate funding for cancer research, prevention and early detection efforts at federal and state levels.

Health Care – Promote patient-centered, accessible, integrated, high-quality health care for all.

This past year the Foundation hosted two key advocacy events that examined the state of prevention for cancer and across the disease spectrum. The first, held on December 3, 2014, focused on “Prevention in the 114th Congress.” The second, on June 30, 2015, was called “Prevention Across the Spectrum” and included advocates from other chronic diseases as well as cancer. In conjunction with the first event, the Foundation unveiled a new Advocacy Toolkit. The Toolkit is available in hard copy or a version can be downloaded from the advocacy website. It can be used by grassroots advocates who are trying to influence policy.
In 2015, the Foundation advocated for the following issues:

- **Increasing federal funding for cancer research.**
- **Protecting public health through the regulation of indoor tanning beds.**
- **Enabling Medicare beneficiaries to undergo colonoscopies without having to pay coinsurance. This could ultimately increase screening rates and reduce the incidence of colon cancer.**
- **Saving Physical Education Program (PEP) grants so that school-aged children still have the opportunity to have physical education. Physical activity is a proven factor in preventing cancer and other diseases.**
- **Passing the 21st Century Cures Act (H.R.6), legislation which could create positive change in how biomedical research is conducted, modernize the drug approval process and increase medical research funding. (Stay tuned. We hope that the Senate version will be introduced in the coming year.)**

The work of the Prevent Cancer Foundation, along with the efforts of our grassroots advocates, is more critical than ever before. As we reach the end of the 114th Congress, and the next Presidential election cycle heats up, prevention must be promoted and protected as a cost-effective strategy and—most important—as a way to save lives.
Five different Prevent Cancer Foundation ads were displayed from April through September at the corner of 42nd and Broadway in Times Square.
Aubry Bozanno, Miss Illinois United States stopped by the Foundation to speak with the staff about her platform, cancer prevention.
From January 4 – 10 more than 1,000 gamers from around the world came together in Dulles, VA to play speed games during the Awesome Games Done Quick marathon. Thanks to the 24/7 live streaming from TwitchTV, more than 25,000 donors from across the globe who watched the games donated more than 1 million dollars. The funding was used in part for the following:

Research Grant
The Foundation awarded an Awesome Games Done Quick research grant to Andrew Dannenberg, M.D. at the Weill Cornell Medical College in New York, and Clifford Hudis, M.D. of the Memorial Sloan Kettering Cancer Center for their study of blood-based biomarkers of white adipose inflammation, which could be a tool for cancer risk reduction in breast, prostate and tongue cancers.

International Grant
We awarded an international grant to Philip Castle, M.D. of the Albert Einstein College of Medicine to evaluate mobile phone technology for
cervical cancer screening. The study will evaluate the new imaging technology developed by ODTMobile, an Israeli startup, as part of an NIH multi-year grant in Rwanda.

Think About the Link National Campaign

Event proceeds provided startup funding for a multi-year campaign designed to raise the public’s awareness of the link between several viruses and certain types of cancer, (cervical, oropharyngeal and liver), as well as encouraging at-risk groups to take action and to significantly lower their chances of developing the disease.

World Cancer Leaders’ Summit

Prevent Cancer was able to sponsor the 2015 World Cancer Leaders Summit in Istanbul, Turkey, an exclusive annual event that includes leaders from the United Nations, Ministries of Health, international cancer and non-communicable disease-focused organizations, academia and the private sector who come together to consider ways we can improve international collaboration. The conference is organized by the Union for International Cancer Control in Geneva, Switzerland.
The Foundation was honored as one of the 2015 beneficiaries for the Newswomen of DC’s NewsBash for Breast Cancer. The annual event raises awareness and funds for breast cancer causes. The event began in 2009 when a group of good friends in the TV news industry decided to get together for this cause. Supporters, survivors, politicos and friends come together for the evening to help raise awareness for breast cancer and to raise funds for research and education. Proceeds supported the Foundation’s ¡Celebremos la Vida¡ program for medically underserved Latinas. We were honored that Rep. Linda Sanchez (D-CA) joined us to make remarks.

The Newswomen of DC raised $10,000 for the Foundation at the annual NewsBash for Breast Cancer.

**NEWSBASH/NEWSWOMEN OF DC**

Fox 5 News Anchor Laura Evans speaks to the crowd about the importance of cancer prevention.

Cancer survivors created and modeled in the AliveAgain! Fashion Show to raise money for the Foundation.
Ireland: Legendary and Contemporary

Recognized as one of “Washington’s Top 10 charity events” by BizBash and covered in Washington Business Journal, Washington Life, Bisnow and the Diplomatic Pouch, the 2015 Annual Gala raised more than $1.6 million to advance the Foundation’s mission of saving lives across all populations through cancer prevention and early detection. Event proceeds support research, outreach and education programs.

This Gala allowed the Prevent Cancer Foundation to showcase the rich history and vibrant culture of Ireland. Her Excellency, the Ambassador of Ireland Anne Anderson joined us as honorary patron as we honored “Ireland: Legendary and Contemporary.” Once again, celebrity designer and board member David Tutera transformed the National Building Museum into an unforgettable work of art. Senator Mike Crapo, a prostate cancer survivor and our 2015 Cancer Champion, was honored for his efforts to keep cancer prevention and early detection at the forefront of the minds of his colleagues.

The Prevent Cancer Foundation Annual Spring Gala attracts more than 900 guests from the business, diplomatic, government, medical, sports, media and social communities. The gala is held each year at the National Building Museum and is one of Washington’s premier events.
In January 2016, the Foundation will launch the Think About the Link (TATL) Campaign, an effort to raise awareness of the connection between certain viruses and specific types of cancer.

At any given time, one in every four people in the U.S. is infected with at least one strain of human papillomavirus (HPV). Virtually all cases of cervical cancer are caused by HPV. In addition, HPV is responsible for more than 90 percent of anal cancers, 65 percent of vaginal cancers, 50 percent of vulvar cancers and 35 percent of penile cancers. These cancers are preventable through vaccination!

Approximately 3.5–5.3 million people in the U.S. are living with chronic hepatitis B (hep B) and hepatitis C (hep C) infections—and 65 percent and 75 percent of the infected population are unaware that they have hepatitis B and hepatitis C, respectively. Over the next 10 years, approximately 150,000 people in the U.S. will die from liver cancer and end-stage liver disease associated with chronic hepatitis B or hepatitis C. Many of these deaths could be prevented through immunization (hepatitis B) or screening and treatment (hepatitis C). What’s more, cervical cancer is the leading cancer killer of women in Central and South America and sub-Saharan Africa. Liver cancer is the second leading cause of cancer death worldwide.

Through Think About the Link, the Foundation aims to increase immunization rates for the HPV and hepatitis B vaccine series, as well as access to treatment for hepatitis C in chronically-infected populations, first in the U.S. and, subsequently, worldwide.

Brady Urological Institute

Professor of Urology, Epidemiology, Oncology, and Environmental Health Sciences

Johns Hopkins University School of Medicine

Kent E. Vrana, Ph.D.
Elliot S. Vesel Professor and Chair, Department of Pharmacology

Penn State College of Medicine

Zhen Zhang, Ph.D.
Associate Professor, Department of Pathology and Oncology

Johns Hopkins Medical Institutions
The future of the Prevent Cancer Foundation depends upon sustained contributions from individuals like you. For nearly 30 years, the Foundation has been able to invest over $140 million in lifesaving cancer prevention and early detection programs. On behalf of the Foundation, we appreciate your partnership and ongoing generosity.

WAYS TO GIVE

Here’s how you can continue to support our vision to Stop Cancer Before it Starts™

DIRECT GIVING
Outright gifts of cash or equities to the Foundation, regardless of amount, can support various projects, programs or annual operations, based on your area of interest.

TRIBUTE GIVING/MEMORIAL GIVING
Tribute contributions honor friends, family and colleagues. They also make ideal gifts for special events like birthdays and weddings. Memorial gifts honor the life of a loved one or friend.

SUSTAINED GIVING
Monthly and/or annually recurring gifts provide the Foundation with a reliable source of funds, now and in the future. The Foundation’s website, www.preventcancer.org, explains how you can arrange to have a predetermined gift amount automatically charged to your credit card on a regular basis.

PLANNED GIVING
Estate gifts support the Foundation while providing you and your family with possible tax benefits and/or life income. There are a wide variety of vehicles to consider, ranging from a bequest in your will to various types of charitable trusts.

WORKPLACE GIVING
As a corporate employee, you and/or your spouse may be able donate to the Foundation by participating in your company’s workplace giving campaigns, Combined Federal Campaign and United Way programs. If your and/or your spouse’s company offers a matching gift program, you may be able to double or triple the value of your gifts.

For more information on how you can make a difference in the fight against cancer, please visit the giving link on our website at http://preventcancer.org/get-involved/donate, or contact the Foundation’s Development Office at 703-519-2117.
LEGACY MEMBERS AND LIFETIME FRIENDS

THE EDWARD PERRY RICHARDSON LEGACY SOCIETY

Edward Perry Richardson was the father of Carolyn R. Aldigé, president and founder of the Prevent Cancer Foundation. His struggle against cancer inspired her to establish the organization and his memory has sustained Prevent Cancer’s mission of saving lives through cancer prevention and early detection. Members of the Edward Perry Richardson Legacy Society are special friends of the Prevent Cancer Foundation who have committed to ensuring the legacy of Prevent Cancer by naming it as a beneficiary in their will, charitable gift annuity, charitable trust, individual retirement account or life insurance policy, or have made a gift of real estate or tangible personal property.

MEMORIAL AND HONOR TRIBUTES

These tributes are special ways to honor friends, loved ones and colleagues. Honor gifts often mark a special occasion like Mother's or Father's Day, bar/bat mitzvahs or a birthday. Many couples also designate the Prevent Cancer Foundation as a recipient of contributions in lieu of wedding or shower gifts. In return, the Foundation sends a card acknowledging these thoughtful donations.

HONOR TRIBUTES
Ms. Carolynn R. Aldigé
Ms. Grace Allen
Mr. and Mrs. Bob Allie

THE DOLL SOCIETY
($25,000 and above)
Sir William Richard Shaboe Doll, a distinguished British physician and epidemiologist, was the first scientist to establish the link between smoking and lung cancer. This singular discovery led scientists to identify a genetic mutation which is caused by chemicals found in tobacco smoke.

INDIVIDUALS
$100,000 and above
Estate of Harvey L. Panzer, Jr.

THE BURKITT SOCIETY
($10,000 to $24,999)
Denis Parsons Burkitt was the pioneering British surgeon who first discovered that some cancers could be cured with chemotherapy. He is also known for associating a low-fiber diet with many of the serious diseases in Western society.

INDIVIDUALS
Ms. Catherine P. Bennett and Mr. Fred Frailey

ORGANIZATIONS

$25,000 to $49,999

THE PETO SOCIETY
($5,000 to $9,999)

Sir Richard Peto is a distinguished physician and epidemiologist whose 1981 research at Oxford University with Sir William Doll connected diet and cancer. This work, along with that of other investigators, confirmed that 35 percent of certain cancers may be prevented by eating a healthy diet.
