

## **Learner Objectives for the 2018 Dialogue for Action on Cancer Screening and Prevention**

1. Briefly describe how the Project ECHO model can make quality medical care (such as for hepatitis C treatment) more available in low-resource regions or countries.
2. Identify two best practices or evidence-based strategies that can improve HPV vaccination rates.
3. Name two factors that can promote the successful implementation of lung cancer screening.
4. Name one best practice or evidence-based strategy to increase cancer screening or prevention in an underserved community.
5. Identify one lesson learned in the 80% by 2018 national initiative to increase colorectal cancer screening and briefly describe its importance to successful screening campaigns.
6. Give one reason why the development of a blood-based test for routine cancer screening, capable of detection of tumors in early stages, is so challenging.
7. Name one reasonable expectation to have about how the use of big data may improve health outcomes.
